

DO YOU OFTEN GET UP AT NIGHT TO URINATE?

DO YOU HAVE NOCTURIA?

We are researching the safety and effectiveness of an investigational medication for people who have nocturia (urination at night) caused by nocturnal polyuria (production of a large amount of urine at night).

The DAWN Trial is looking for adults who have experienced symptoms of nocturia within the past 6 months (on average getting up at least once during the night to urinate). Participation in the trial will last for about 4 months and will involve up to 8 visits to a trial center near you.

Please contact the DAWN Trial team in your local area today using the details below for additional information if you think you can help us with this important research. By contacting us, you are under no obligation to take part in the trial.
