

STOP-Cancer

Clinical Trial

Goal of the study:

Is to evaluate the clinical benefit of using genetics to assess overall hereditary genetic cancer risk profile and help pursue preventative measures, which may lead to early detection and treatment of the cancer condition.

The lab test is a cheek swab that will be collected in the office and is **NOT** experimental.

Benefits of Hereditary Genetic Testing

Patients diagnosed with cancer:

- ☀ May lead to overall better therapeutic management and overall care.
- ☀ The results may allow patients to enroll in specific clinical trials or research studies.
- ☀ If positive results, it may provide **family members** the proper information to **also be tested** and to increase their care plan to include screening.
